How PaperCut NG delivers feature-packed, problem-free Google printing

PaperCut NG is the first enterprise print management solution to fully integrate with G Suite, hurdling the most common printing obstacles found in Google printing environments – and making its strengths even better. Here's how:

1. Easy, accountable Chromebook printing

Our BYOD feature Mobility Print installs to Chromebooks in minutes, and lets users print intuitively via the Chromebook's native interface. Plus, it's all part of PaperCut NG, so everything's identified, tracked, and costed with ease.

2. Automatic and reliable printer discovery

Whether mobile, BYOD, or managed device, your printers will pop up automatically without fail. Better yet, you don't need to worry about which drivers to deploy for different operating systems – it's all taken care of.

3. Direct user syncing from G Suite

PaperCut NG lets you sync users directly from G Suite, which means SysAdmins only need to manage a single user pool, and users themselves can log in easily with their Google credentials.

As a **BUSINESS** or **EDUCATIONAL INSTITUTION**, you can:

- ✓ track how many pages are being printed by who, what and when
- ✓ reduce waste and cut costs by promoting responsible printing company wide
- ✓ solve BYOD printing with a solution that complements cloud-based and on-premise networks
- ✓ support your digital transformation with a cost-effective and flexible cloud-based directory
